GETTING STARTED:

Congratulations for gaining access to view this free report.

My name is Lawani Nosayaba. I have taken time in writing this report and sharing this trick which can make whole lot money.

And I have given it for FREE!

If you follow the steps and techniques showed in this report, you will definitely make money betting virtual football...

I want you to succeed just the way I have succeeded in trading virtual football...

I want you to recover all your losses...

Anyway you can thank me later, For now... Read ON!

WHAT IS AN ARB?

This report contains a very vital trick in spotting virtual football arbs.

What is an arb?

There are various definitions of this term on the internet...

I personally define an arb as a type of bet where either way the result of an event goes, you make some profit with your bet. You DO NOT lose whatever way the result ends... It is also called a sure bet.

I've been trading virtual football for close to two years now and within this period I have gained massive experience and made a whole lot of money trading virtual football...

I first came across the concept of an arb on a football betting forum I joined in 2011. But most arbs, in fact virtually all arbs you will see always require two bookmakers. That means placing two or more different bets with each bookmaker on the same event.

For example, This is just a theoretical case though:

Let's say Atletico Madrid is playing Chelsea, The odds of that match going over 2.5 goals is 1.7 in [Nairabet](#). While the odds of it going under 2.5 goals is 1.9...

Meanwhile in BetColony, The odds for that match going over 2.5 goals is 2.6 while under 2.5 goals is 1.3...

Now as you can see there is a clear difference in the odds from the two bookmakers...

The Odd for Under 2.5 goals in [Nairabet](#) is 1.9

The Odd for Over 2.5 goals in BetColony is 2.6

This is AN ARB!!!

Now what do you do next?

I will give you two methods of calculating the amount to bet on the individual odds... The First is a little bit difficult, the second is way easier...

FIRST METHOD

Assuming you have N1,500 in your BetColony Account and N1,500 in your [Nairabet](#) account, That's a total of N3,000...

Simply use this formula to calculate what to bet...

Over Odd Stake = (Under Odd/Total Odds) * Staking Amount

Let me explain with the odds we used in our theoretical example...

$1.9/4.5 * 2000$

4.5 is the sum of the total odds,

1.9 is the Under Odd

Let's assume N2000 is the amount you want to bet with...

So...

Amount to Bet For Over Odd = $(1.9/4.5) * N2000$

Amount to Bet For Over Odd = N844.4

So you stake N844.4 on Over 2.5 goals in BetColony...

Then to get the amount to stake for the Under 2.5 goals, Use this formular

Amount to stake for Under Odd

= Total Staking Amount - Amount to bet for Over Odd

That is, $N2,000 - N844.4 = N1155.6$

So you stake N1155.6 for Over 2.5 goals on [Nairabet](#)...

So what this means is that you made a total bet of N2,000...

Whichever way the result comes out you make a profit!!!

If the match goes over 2.5 goals; $N1155.6 * 1.9 = N2195.65$

If the match goes under 2.5 goals; $844.4 * 2.6 = N2195.44$

(P.S Because of the approximations I made so the slight different in figures)

So whichever way the match goes you make a profit of N195!!!

Do you understand the concept now?

SECOND METHOD

Simply visit this website...

http://annabet.com/tools/Wizard_Of_Odds/

It's an arb calculator... Enter the odds of over 2.5 goals in the first box and under 2.5 odds in the next box...

Then enter the total stake... e.g 2000

Press the button "Calculate"

It will show you the %Profit you will get...

Then it will tell you what to bet on the odds of 2.6 and odds of 1.9...

Then it will also tell you your Net win...

This tool is much more accurate and faster than the calculations in the first method... I strongly suggest you use this if you are not that good in calculations...

P.S. This is just a theoretical example of how arbs work... The condition above doesn't work like that with [Nairabet](#) and [betcolony](#)... You will Never find arbs like this... I just used it to explain the concept of arbs...

Now it is highly unlikely you find such arbs as stated above with Nigeria bookies... (That doesn't mean you shouldn't search for them though!!!) Why? Because virtually all of Nigerian bookies use the same Odds suppliers... eg [Nairabet](#), [Merrybet](#) and [1960bet](#)...If you notice the layout of their websites look alike... They have the same range of odds, So its is highly unlikely you will spot an arb with Nigerian bookies...

EXCEPT OF COURSE...

IN THE VIRTUAL FOOTBALL LEAGUE!!!

One thing that has always fascinated me with the virtual football league is how fast it is to stake and instantly win bets unlike the real world where you stake and have to wait for hours for the match to be played...

The concept of arbs you will find in this book, I can BOLDY CLAIM You WILL NEVER FIND IT ELSEWHERE... I developed this strategy myself... I call it the "In-House-Arbs"

Lol, I love the names I give to my strategies... Cute, Isn't it?

Don't mind me... Let's focus on the beauty of the money you will generate from this strategy instead of the beauty of the name...

Lol.

The concept of arbs is usually related with using two or more bookies... But the concept I developed makes use of "Just one bookie!" You can use only [Nairabet](#), Or only [Merrybet](#) (which I strongly recommend) or only [1960bet](#)...

I will be using the names of teams used in the standard notation as those of [Merrybet](#), [Nairabet](#) and [1960bet](#) have been customized... Study the chart below to see the team names in the different bookies...

| STANDARD NAMES | MERRYBET | NAIRABET | 1960BET |
|----------------|-------------|-------------|------------|
| Madrid | Lagos Stars | Lagos Stars | Lagos |
| Berlin | Kaduna | Aba Lions | Ibadan |
| Amsterdam | Warri | Abuja | Kano |
| London | Abuja Stars | Enugu Town | Kaduna |
| Oslo | Sagamu | Borno Kings | Zaria |
| Rome | Makurdi | Kano Power | P.Harcourt |
| Zagreb | Benin | Awka United | Maiduguri |
| Paris | Owerri | Makurdi | Ilorin |
| Ankara | Kano | Asaba | Enugu |
| Copenhagen | Aba | PH Rovers | Oyo |
| Bern | Calabar | Nnewi | Warri |
| Stockholm | Akure | Oshogbo | Jos |
| Athens | Enugu | Warri Babes | Aba |
| Edinburg | Ilorin | Uyo United | Okene |
| Vienna | Uyo | Abeokuta | Sokoto |
| Lisbon | Ibadan | Calabar | Benin City |

Done?

P.S From henceforth I will using the names in the standard convention. You can check the table to convert a team’s name to the one in your bookie. Thanks.

Ok Let’s Move On...

The trick lies in the fact that there are some irregularities which occur in the virtual football league as regards the Odds movement...

Take a look at this fixture

VFL Copenhagen - VFL Athens

This particular fixture where Copenhagen at Home plays Athens Away is one where you can spot an arb... Most of the time this fixture will contain an option "OVER 0.5 GOALS"

When you see this, Check the Odds given for this market, You will see Odds ranging from 1.10 to 1.3...

Then you will check the correct score Odds for 0:0...

You might get Odds from 4.25 to as high as 9.0...

Now we are going to check if the odds fit into the system...

Then go to this website

http://annabet.com/tools/Wizard_Of_Odds/

Input the Odds of Over 0.5 goals and that of correct score 0:0

Input the amount you want to stake and press calculate...

If you see "No arbitrage" then the odds do not fit into the system...

If you see a positive profit, then the Odds fit into the system and you will see how much percentage profit you will make from placing the bets...

What this means is that you will place two bets, One for Over 0.5 goals and another for a correct score of 0:0...

**SO NO MATTER THE OUTCOME OF THE MATCH YOU WILL
SURELY WIN!!!**

Now the downside of this strategy is just that it is rare to see the arbs in the virtual football because the betrader company supplying the service are constantly refreshing their system to spot these arbs too and remove them... But the truth is they always exist...

There was a day I spotted THREE ARBS IN ONE SEASON!!! It must have been as a result of an irregularity in their system... But I made cool cash from this... Mostly these arbs occur once every three days, sometimes four days... You might be lucky and spot these arbs like twice in a day... It all depends on how consistent you are in watching out for them...

Below is a list of fixtures that also have these markets...

VFL Copenhagen(Home) vs VFL Lisbon(Away)

VFL Vienna(Home) vs VFL Copenhagen(Away)

VFL Copenhagen(Home) vs VFL Zagreb(Away)

VFL Zagreb(Home) vs VFL Athens(Away)

VFL Zagreb(Home) vs VFL Lisbon(Away)

VFL Copenhagen vs VFL Vienna(Away)

VFL Vienna(Home) vs VFL Zagreb(Away)

So watch out for these fixtures, calculate with the odds given and find your arbs!!! You can also try and search out for other forms of arbs yourselves with the concept I have given...

Note: This is just a free report and I cannot give it all out here because of the bookies crawling all over the internet looking for strategies to foil...

I'm currently working on a strategy that enables you spot sure bets at least twice every season, So that means about 18 times in a day(There are about 9-10 seasons in a day) you will place sure bets that will win all the time... Just stay subscribed and I'll let you know when it will be available...

For those who want to take charge of their income today and start making money Daily trading Virtual Football... I want to help you out...

I'm giving out my "Five Team Killer-Win" Strategy to you at a discounted price of N3,999... There are limited copies available!
